# A Data Love Story

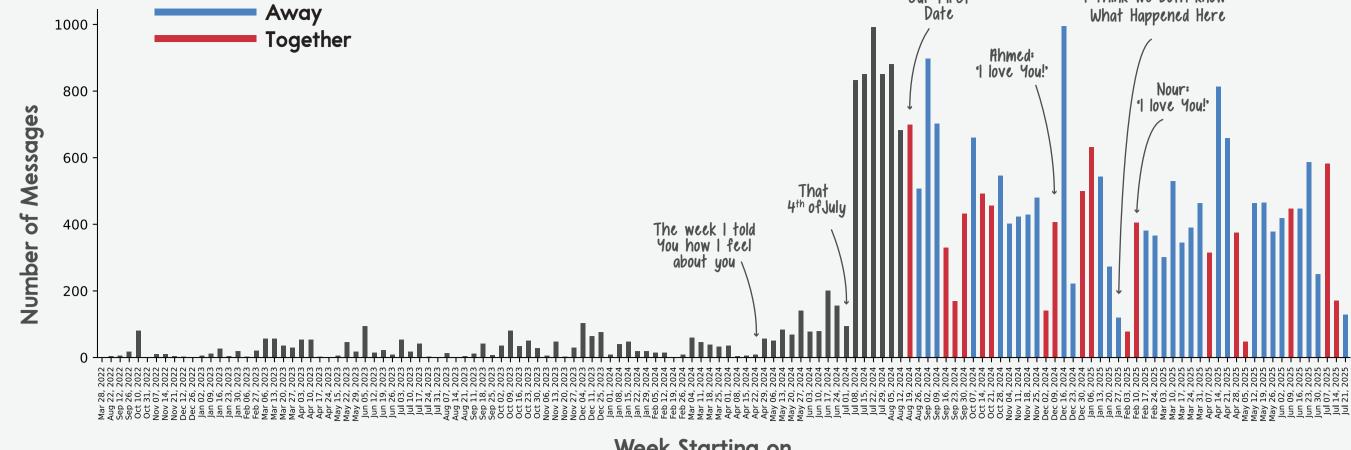

What Data can tell us about our long distance relationship with a year worth of data Here's The Infographic of NA in NA

### Our Journeys Timeline

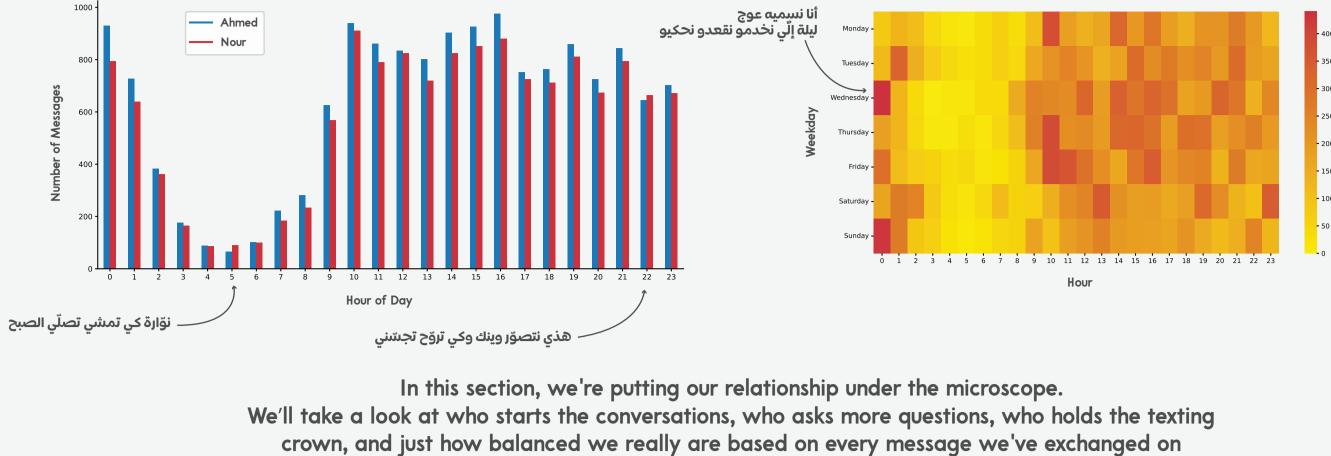

Data and design are where I feel most creative, so why not share that with the person I love most? I believe numbers can tell stories, and ours is full of everything: love, distance, patience, laughter, the occasional sad grumpy weeks, fights, hugs and more. So I did what I do best: I charted our journey. Using Messenger data from our very first "Aaslema" to July 22, 2025, I turned our love story into graphs, stats, and timelines.

> But before we dive in Happy Anniversary, Nawarry. I hope our jouney never finds its end.

### Relationship Balance شكُونَ يُجِبِدُ في اللهدرة أكثر من لاخر In this section, we're putting our relationship under the microscope. We'll take a look at who starts the conversations, who asks more questions, who holds the texting crown, and just how balanced we really are based on every message we've exchanged on

Questions 200 500 100 250 **Ahmed** Nour **Ahmed** Nour Sender **Initiator** I asked ChatGPT to analyse our Personalities using the message count and word count per message, who initates the conversation and who ask more questions and it seems it can give cludes about each personality trait and communication style based on our data

> Comfortable with frequent communication. • Likes elaborating or storytelling. • May feel responsible for keeping the conversation going. Nour is just slightly behind which suggests:

Both are highly engaged, and the balance is relatively even, which is a good sign

of mutual investment. But since Ahmed slightly leads in both count and word

volume, we might say:

Ahmed could be a more expressive or verbose texter. Possibly:

• Also very engaged. • May prefer more concise or thoughtful replies. • Could be a reflective communicator, typing less but with intention.

Ofcourse these are interpretations using Data and NOT FACTS!

texting habits are influenced by mood, schedule, typing speed, and personal

Love You

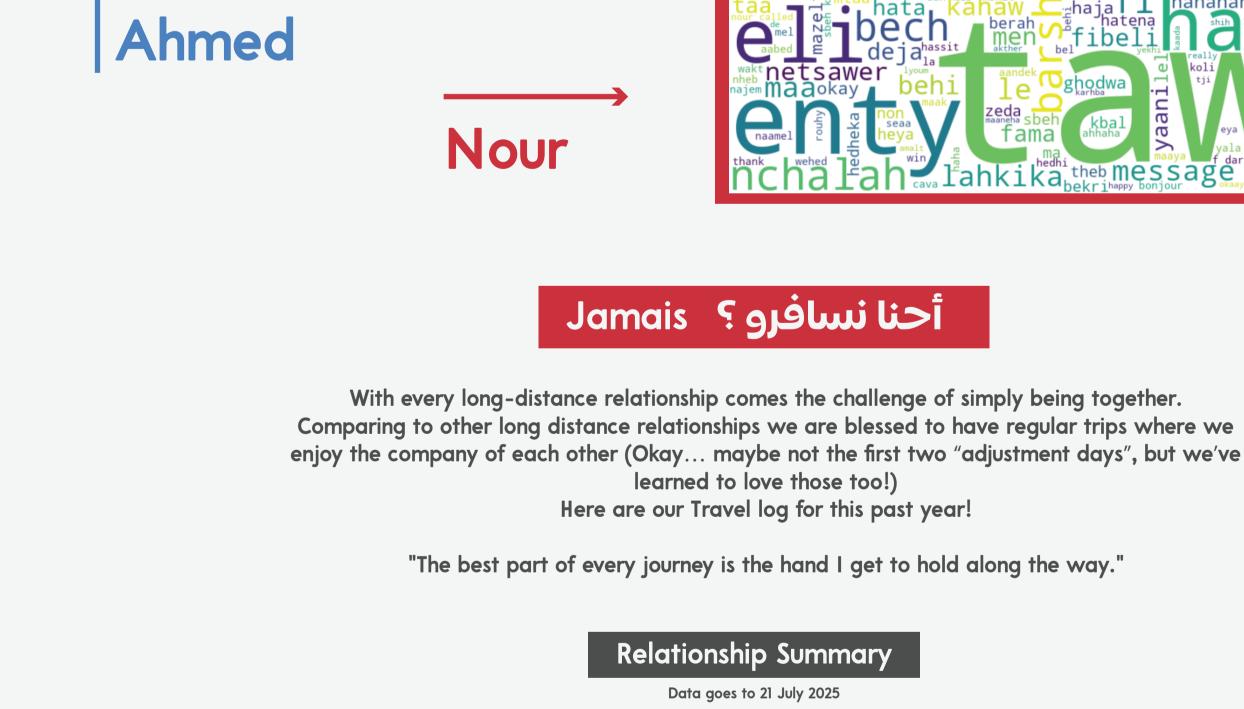

communication norms. Still, they provide great insight into compatibility and conversational chemistry

## We've traveled together 13 times so far, which might make you think we've covered half the country by now.

But in reality, most of those trips were return journeys to familiar places: Michigan (3 times), Dallas (3 times), and Tunisia (2 times). We also visited New York and New Jersey twice. As for Oklahoma, Massachusetts, and Pennsylvania, they each got a single appearance. So yes, the map is still pretty empty... but that just means there's so much left for us to discover together.

We've each seen a lot on our own, but the real adventure is seeing what's next, this time, side by side.

And this is just the U.S.! We haven't even started discovering on the world map yet.
